In this case, a potential receptacle is also added and the direct-current voltmeter is mounted on the bracket. The wiring diagram for such an equipment will be similar to that shown in Fig. 33, except that oil switches are used instead of lever switches, and the instruments are operated from transformers instead of direct. Separate Exciter Panel. In case one or two exciters are used to supply excitation for the whole station, it is necessary to install a separate controlling panel, with the following equipment: 1 Ammeter 1 Voltmeter 1 Rheostat mechanism 1 Potential receptacle 1 Triple-pole lever switch If a double-circuit panel is used, the above equipment will be double, except the voltmeter which will be common to both exciters. Plants of this character do not usually contain rotary converters or synchronous and induction motors which must be controlled from the switchboard. Feeder Circuits. Feeder circuits may be either single-or threephase. Single-phase circuits will be equipped with: 1 Ammeter 1 Automatic oil switch (double-pole) 1 Current transformer Double-circuit panels would have double the above equipment. Three-phase panels will be equipped with: 1 Ammeter 1 Automatic oil switch (triple-pole) 1 Current transformer Double-circuit panels will have double the above equipment. If the three-phase panels are to be used for power only, the above is satisfactory, but quite often some lighting may be taken from a three-phase line, and this may cause considerable unbalancing.
